How to...

...get an API key.

Register for a key on the site in question (e.g., [Virginia](#)).

...browse the Code starting at the root.

`http://vacode.org/api/structure/?key=[api_key]`

...get information about a given law.

`http://vacode.org/api/law/[section_number]?key=[api_key]`

...get a information about a given title/chapter/part/etc.

`http://vacode.org/api/structure/[identifier]?key=[api_key]`

...get all definitions for a word or phrase.

`http://vacode.org/api/dictionary/[term]?key=[api_key]`

...get the definition for a word or phrase as it's used in a specific law.

`http://vacode.org/api/dictionary/[term]?section=[section_number]&key=[api_key]`

...restrict the fields that are returned.

Append `&fields=field1, field2, field3` to the query, substituting the desired field names for "field1," etc.

Methods

Dictionary

When provided with a term, returns all definitions for that term found within the code. Optionally, when provided with a section identifier and no term, returns all terms that apply within the scope of that section.

Query format

`http://vacode.org/api/dictionary/[word_or_phrase]?key=[api_key]`

Optional parameters

Section number

Pass the parameter `section` and a section number, and get only the definition of the term that is relevant to that law. (Most terms have a defined scope of a given structural unit or law.) *N.B.: Because only one definition is returned, rather than providing an array of definitions, just a single definition's fields are returned. They are not stored as the lone element in an array, but are at the top level of the JSON.*

`http://vacode.org/api/dictionary/person?section=12.1-14&key=[api_key]` `http://vacode.org/api/dictionary/?section=12.1-14&key=[api_key]`

Callback

Pass the parameter `callback` and a callback string to have results returned as JSONP.

`http://vacode.org/api/dictionary/[word_or_phrase]?key=[api_key]&callback=d9f31Ib013`

Specified fields

Pass the parameter `fields` and a comma-separated listing of fields to limit the response to those fields.

`http://vacode.org/api/dictionary/word_or_phrase?key=[api_key]&fields=definition`

Fields

When looking up a definition

Name	Type	Description	Notes
term	string	The term that is being defined.	
definition	string	The text of the definition.	
scope	string	How broadly that this definition applies.	This is based on the structural unit labels, which vary between implementations. Possible values might be title , chapter , part , or others. A definition that applies to just one law would have a value of section , while a definition that applies to the whole code would have a value of global .
section_number	string	The unique identifier for the section in which the definition appears.	
url	string	The URL of the section in which the definition appears.	
formatted	string	The definition, with display-ready formatting and a citation.	This is the same as the content of definition , with typographic niceties and a parenthetical citation.
generic	boolean	Determines if the query should include terms from the generic dictionary.	Overrides the USE_GENERIC_TERMS setting.
api_version	integer	The version of the API that is returning this result.	

Term list

Name	Type	Description	Notes
term	string	The term that is being defined.	

Sample queries and responses

`http://vacode.org/api/dictionary/person?section=12.1-14&key=[api_key]`

```
{
  "term": "person",
  "definition": "\"Person\" includes any individual, corporation, partnership, association, cooperative, limited liability company, trust, joint vent",
  "section_number": "1-230",
  "scope": "global",
  "url": "http://vacode.org/1-230/",
  "formatted": "\"Person\" includes any individual, corporation, partnership, association, cooperative, limited liability company, trust, joint vent",
  "api_version": "1.0"
}
```

Edited for brevity.

[http://vacode.org/api/dictionary/?section=12.1-14&key=\[api_key\]](http://vacode.org/api/dictionary/?section=12.1-14&key=[api_key])

```
{
  0: "adult",
  1: "bond with surety",
  2: "state agency",
  3: "city",
  4: "collegial body",
  5: "courts of record",
  6: "ex officio",
  7: "includes",
  8: "real estate",
  9: "blighted property",
  api_version: "1.0"
}
```

Law

When provided with a section number identifying an individual law, returns everything that The State Decoded knows about that law.

Query format

[http://vacode.org/api/law/\[section_number\]?key=\[api_key\]](http://vacode.org/api/law/[section_number]?key=[api_key])

Optional parameters

Callback

Pass the parameter **callback** and a callback string to have results returned as JSONP.

[http://vacode.org/api/law/\[section_number\]?key=\[api_key\]&callback=d9f31b013](http://vacode.org/api/law/[section_number]?key=[api_key]&callback=d9f31b013)

Specified fields

Pass the parameter **fields** and a comma-separated listing of fields to limit the response to those fields.

[http://vacode.org/api/law/\[section_number\]?key=\[api_key\]&fields=catch_line,url_official_url,citation](http://vacode.org/api/law/[section_number]?key=[api_key]&fields=catch_line,url_official_url,citation)

Fields

Name	Type	Description	Notes
section_number	string	The unique identifier for this section.	
section_id	integer	Internal unique identifier for this law.	
structure_id	integer	Internal unique identifier for the law's containing structural unit.	
catch_line	string or null	The title of this section.	Not all legal codes have catch lines. California's laws, for instance, lack them.
history	string or null	The acts of the legislature that created this law.	Only some legal codes include histories.
full_text	string	The complete text of the law as a single string of text.	This duplicates the collective contents of `text`, but concatenates all subsections into a single string.
repealed	true/false	Indicates whether this law is still in force.	Only some legal codes continue to publish laws that have been repealed.
text	array	Contains the subsections of text that comprise this law.	There is one child element for each subsection. Some codes may be broken up not by labelled subsection, but by paragraphs that lack any labels or unique identifiers.

Name	Type	Description	Notes
text	string	The text of the subsection.	
type	string	What type of subsection this is—`section` (the default), `table`, `illustration`, or possibly others, as dictated by the needs of each legal code.	
prefixes	array	A list of of the complete prefix path that uniquely identifies this subsection.	
prefix	string or null	This subsection's identifying prefix.	
entire_prefix	string or null	The complete, uniquely identifying prefix for this subsection.	The same data that's in `prefixes`, only collapsed into a single string.
prefix_anchor	string or null	The complete, uniquely identifying prefix for this subsection, ready to be used in a URL.	This is `entire_prefix`, URL encoded.
level	integer	How deeply nested that this level is, in the hierarchy of subsections. 1 is the top level.	
ancestry	array	Contains a subsection for each hierarchically nested structural unit that contains this law.	
id	integer	Internal unique identifier for this structural unit.	
name	string	The title of this structural unit.	
identifier	string	The identifier for this structural unit.	This will often—but not always—be a number.
label	string	The name of this level of structural unit.	
url	string	The public (non-API) URL for this structural unit.	
structure_contents	array	Contains a subsection for each law that is part of the immediate structural unit (siblings of the requested section).	
id	integer	Internal unique identifier for this law.	
structure_id	integer	Internal unique identifier for the containing structural unit.	
section_number	string	The unique identifier for this section.	
catch_line	string or null	The title of this section.	Not all legal codes have catch lines. California's laws, for instance, lack them.
url	string	The public (non-API) URL for this law.	
api_url	string	The API URL for this law.	
previous_section	array	The prior law within the containing structural unit, as ordered.	
id	integer	Internal unique identifier for this law.	
structure_id	integer	Internal unique identifier for the containing structural unit.	
section_number	string	The unique identifier for this section.	
catch_line	string or null	The title of this section.	Not all legal codes have catch lines. California's laws, for instance, lack them.
url	string	The public (non-API) URL for this law.	
api_url	string	The API URL for this law.	

Name	Type	Description	Notes
next_section	array	The following law within the containing structural unit, as ordered.	
id	integer	Internal unique identifier for this law.	
structure_id	integer	Internal unique identifier for the containing structural unit.	
section_number	string	The unique identifier for this section.	
catch_line	string or null	The title of this section.	Not all legal codes have catch lines. California's laws, for instance, lack them.
url	string	The public (non-API) URL for this law.	
api_url	string	The API URL for this law.	
metadata	array, or null	Contains all metadata about this law that is stored separately in the metadata table.	By default, this contains nothing, but any State Decoded implementation that wants to store additional metadata about laws—data beyond the structure otherwise described here—would emit that metadata here.
court_decisions	array, or null	Every court decision that cites this law.	Only available within State Decoded implementations that have chosen to ingest court rulings.
official_url	string, or null	The URL for this law on the official website for this legal code.	
history_text	string, or null	A narrative version of the history field.	
references	array	A listing of all other laws that refer to this one.	
id	integer	Internal unique identifier for this law.	
section_number	string	The unique identifier for this section.	
catch_line	string or null	The title of this section.	Not all legal codes have catch lines. California's laws, for instance, lack them.
url	string	The public (non-API) URL for this law.	
related	array	A list of all other laws that are have been determined through lexical analysis to be similar to this one.	This list is generated by Solr's MoreLikeThis handler .
id	integer	Internal unique identifier for this law.	
catch_line	string or null	The title of this section.	Not all legal codes have catch lines. California's laws, for instance, lack them.
section_number	string	The unique identifier for this section.	
url	string	The public (non-API) URL for this law.	
amendment_years	array	A list of every year in which this law was amended.	
url	string	The public (non-API) URL for this law.	
citation	array	A list of formal citation methods for this law.	
official	string	A formal citation for this law, in <i>The Bluebook</i> format.	
universal	string	A formal citation for this law, in the AALL Universal Citation Guide format.	
api_version	integer	The version of the API that is returning this result.	

Sample query and response

Edited for brevity.

```

Structure

When provided with a structural identifier identifying an individual structural unit (e.g., a title, a chapter, a part, etc.), returns everything that The State Decoded knows about that structural unit.

Query format

[http://vacode.org/api/structure/\[identifier\]?key=\[api_key\]](http://vacode.org/api/structure/[identifier]?key=[api_key])

Leave [identifier] blank to get a top-level listing of structural units—that is, the major structural units that make up the basic divisions of the code (e.g., titles).

Optional parameters

Callback

Pass the parameter **callback** and a callback string to have results returned as JSONP.

http://vacode.org/api/structure/[identifier]?key=[api_key]&callback=d9f31Ib013

Specified fields

Pass the parameter **fields** and a comma-separated listing of fields to limit the response to those fields.

http://vacode.org/api/structure/[identifier]?key=[api_key]&fields=catch_line,url_official_url,citation

Fields

Name	Type	Description	Notes
ancestry	array	Information about every structural unit included in the path specified in the request.	
id	integer	Internal unique identifier for this structural unit.	
identifier	string	The identifier for this structural unit.	This will often—but not always—be a number.
name	string	The title of this structural unit.	
label	string	The name of this level of structural unit.	
parent_id	integer	Internal unique identifier for this structural unit’s parent.	
level	integer	How deeply nested that this level is, in the hierarchy of subsections. 1 is the top level.	
url	string	The public (non-API) URL for this structural unit.	
children	array	A list of every structural unit that is a child of the requested one.	
id	integer	Internal unique identifier for this structural unit.	
label	string	The name of this level of structural unit.	
name	string	The title of this structural unit.	
identifier	string	The identifier for this structural unit.	This will often—but not always—be a number.
url	string	The public (non-API) URL for this structural unit.	
api_url	string	The API URL for this structural unit.	
laws	array	A list of every law that is a child of the requested structural unit.	
id	integer	Internal unique identifier for this law.	
structure_id	integer	Internal unique identifier for the containing structural unit.	
section_number	string	The unique identifier for this section.	
catch_line	string or null	The title of this section.	Not all legal codes have catch lines. California's laws, for instance, lack them.
url	string	The public (non-API) URL for this law.	
api_url	string	The API URL for this law.	
api_version	integer	The version of the API that is returning this result.	

Sample query and response

}
},
"laws": false,
"api_version": "1.0"
}
```

Search

When provided with a term, returns all uses of that term within the code, sorted by relevance, limited to the top 100 results.

Query format

```
http://vacode.org/api/search/[word_or_phrase]?key=[api_key]
```

Optional parameters

Detail Level

Pass the parameter **detailed** and either **true** or **false** to indicate whether you want brief results or detailed results. Detailed results are exactly the same as if you'd used [the Law method](#) for each result. The standard fields returned by the Search method are all replaced with the standard fields returned by the Law method, with the exception of the **score** field, which remains.

Callback

Pass the parameter **callback** and a callback string to have results returned as JSONP.

```
http://vacode.org/api/search/[word_or_phrase]?key=[api_key]&callback=d9f31Ib013
```

Specified fields

Pass the parameter **fields** and a comma-separated list of fields to limit the response to those fields.

```
http://vacode.org/api/search/word_or_phrase?key=[api_key]&fields=results
```

Fields

Name	Type	Description	Notes
results	object	A list of the results of this search.	Limited to the first 100 results.

http://vacode.org/api/suggest/[word_or_phrase]?key=[api_key]

Optional parameters

Callback

Pass the parameter `callback` and a callback string to have results returned as JSONP.

http://vacode.org/api/suggest/[word_or_phrase]?key=[api_key]&callback=d9f31Ib013

Fields

Name	Type	Description	Notes
terms	object	A list of the suggested terms.	Limited to the first 4 results.
api_version	integer	The version of the API that is returning this result.	

Sample query and response

Edited for brevity.

http://vacode.org/api/suggest/lawsu?key=[api_key]

```
{
  "terms": [
    {
      id: 0,
      term: "laws"
    },
    {
      id: 1,
      term: "lawful"
    },
    {
      id: 2,
      term: "lapse"
    },
    {
      id: 3,
      term: "lawsuit"
    },
    {
      id: 4,
      term: "lawns"
    }
  ],
  "api_version": "1.0",
}
```

Errors

When a request cannot be completed, the API will return a JSON-formatted error. For example, if an invalid key is provided in a request, the response would be as follows:

```
"error"
{
  "message": "An Error Occurred",
  "details": "Invalid key."
}
```
